

WELCOME TO ORBITO

OPBNB

MISSION & VISION

Helping People Earn With Dignity and Grow
Together

Mission

To create a **transparent, secure, and decentralized ecosystem** where individuals can grow their wealth through blockchain-powered network opportunities. Orbito aims to empower people worldwide by combining **blockchain technology, smart reward systems, and community-driven growth**, ensuring fair participation and financial inclusion for everyone.

Vision

To become a **global leader in blockchain-powered network platforms**, transforming the way communities collaborate, earn, and grow together. Orbito envisions a future where decentralized technology creates **equal opportunities, financial freedom, and sustainable digital economies** for millions of people around the world.

BLOCKCHAIN

Blockchain technology does not depend on third-party management agencies or external hardware facilities, and it operates without central control. Aside from the blockchain's own structure, information is maintained through distributed accounting and storage.

- ✓ **Decentralized** – No owner, no admin, no hierarchy, and no back office.
- ✓ **Immutable** – Permanent record. Fraud Prevention
- ✓ **Transparent** – 100% openness; every transaction is verifiable.

WHAT IS OPBNB?

opBNB is a **Layer-2 scaling solution** for **BNB Chain** that improves transaction speed and reduces fees. Built to scale the BNB Chain ecosystem

- ✓ 1. High Performance
- ✓ Low Gas Fees
- ✓ EVM Compatibility
- ✓ Developer Friendly

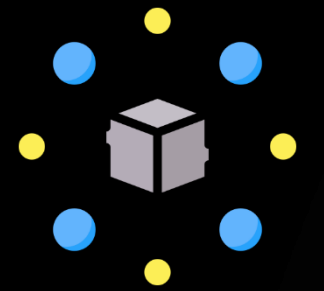

What is Smart Contract?

A **Smart Contract** is a **self-executing digital agreement** stored and run on a blockchain. The terms and conditions of the agreement are written in code.

When the predefined conditions are met, the contract **automatically executes** without the need for any intermediary such as a bank, lawyer, or third party.

What is Decentralisation?

Decentralization means that control of a system is **not held by a single authority or organization**. Instead, the system is operated by a **network of multiple computers (nodes)**. In blockchain, data is distributed across many nodes rather than being stored on one central server.
